

T3 UV one-loop RGE term comparison

Each running coupling has its own table. Rows are model configurations and columns are additive structures in the beta function. Every populated cell contains the complete model-specific term, including its numerical coefficient. A dash means that the term is absent for that configuration. All equations use $16\pi^2\,\mu\,dX/d\mu=\beta_X^{(1)}$. Gauge-coupling results use the same RGBeta $g^2\rightarrow g$ conversion as in the previous report.

$$\beta_{g_Y}^{(1)}$$

$$16\pi^2\,\mu\frac{dg_Y}{d\mu}=\beta_{g_Y}^{(1)}$$

Column Representative term structure
