

T3 group factors: UV

Active theory: SM + $S_1 + S_2 + F$. The same beta function is shown across runs in a single comparison table, with exact analytic group factors in the run columns.

$$j = \frac{d-1}{2}, \quad C_2(d) = \frac{d^2-1}{4}, \quad T(d) = \frac{d(d^2-1)}{12}.$$

In every comparison table, $\mathcal{S}$ denotes the RGE structure multiplying the displayed group factor in $16\pi^2\beta$.

Threshold interpretation

At $\mu = M_F$, the fermion F is integrated out. Therefore y_1 , y_2 and M_F cease to be active EFT parameters and their information is transferred to the matched $C_{LLS_1S_2}$ boundary tensor.

Convention note

All numerical group factors above are read from the analytic group-factor modules used by the pipeline; the report does not hard-code A–E coefficients.
