Each running coupling has its own table. Rows are model configurations and columns are additive structures in the beta function. Every populated cell contains the complete model-specific term, including its numerical coefficient. A dash means that the term is absent for that configuration. All equations use  $16\pi^2\,\mu\,dX/d\mu=\beta_X^{(1)}$ . Gauge-coupling results use the same RGBeta  $g^2\rightarrow g$  conversion as in the previous report.
